Input error checks for:
- Date Format
- Email Format
- Missing fields
- Zip being 5 digits

Explanantion: Error input checks are handled by the client side since I can catch errors at any step it may fail.However while faste server side would have been a more secure choice.

Instructions: Once you reach the home page you can select which table you want to see options for. Then once you selected a table you can choose either Create,Read,View, Update, or Delete in relation to the table chosen. Also if need be you can click Home to return to the starting page.

Create: Adds row to Table
Read: Searches table for match
View: See all rows within table
Update: Alter selected rows data
Delete: Delete row within table
